

smile on Your First Teeth are Important!

Primary teeth are often called baby teeth or milk teeth. It is important to preserve baby teeth when possible. Primary teeth can impact eating, speech and future tooth placement.

February is Children's Dental Health Month. Please join us on our mission to create more healthy mouths. We invite you to learn more and share this information. Together, we can make a difference!

Everyone is different, but teeth usually grow in like this...

By age 3
all primary teeth
typically arrive.

These teeth are
intended to last
for up to **10 years**.

1 years
Incisors

2 years
Canine & First Molars

3 years
Second Molars

Cavities and your primary teeth

Cavities are a result of tooth decay, which occurs when acid in food attacks teeth.

BAD: Cavities can spread like a cold, from one tooth to another.

GOOD: Cavities can be corrected for a healthier future!

Did you know?

By age 4 more than
25%
kids have at least
one CAVITY

By age 5
60%
will have experienced
TOOTH DECAY

Keep your teeth healthy!

Everyone over 6 months is encouraged to brush, floss and see the dentist twice a year!
